Education

University of Wisconsin–Whitewater
B.S. in Computer Science | GPA: 3.8

Whitewater, WI
May 2027

Honors: Dean's List (6 semesters)

Relevant Coursework: Machine Learning, Software Engineering, Advanced Databases, Data Science, Cloud Computing, Linear Algebra

Experience

Summit Moving & Junk Removal LLC
Co-Founder & Software Engineer

Janesville, WI
June 2025 – July 2026

- Co-founded a moving and junk-removal company generating \$100K+ in gross revenue; built software to coordinate 200+ jobs across Wisconsin.
- Built a React and Supabase/PostgreSQL scheduling and logistics platform used by a 5-person team, replacing notes/chat with centralized job assignment, pricing, and equipment tracking.
- Developed an AI-assisted call and lead pipeline with n8n, Twilio, Vapi, and Anthropic API to record/transcribe calls, automate SMS follow-ups, and centralize leads.
- Delivered customer booking, quoting, and automated email workflows, plus a MapTiler route planner for field outreach.

Sass Web Design
Freelance Web Developer

Janesville, WI
April 2024 – Present

- Collected \$5K+ in freelance revenue across 5 clients, with 2 production websites and 5 projects in active development.
- Build full-stack React/Tailwind applications with databases and custom admin panels, owning design, development, deployment, and client communication.
- Implemented fitness assessment and contact forms that generated 20+ submissions in the first month for a gym client.

Rock County Information Technology
IT Deskside Support Intern

Janesville, WI
July 2026 – Present

- Built a PowerShell migration script that copies required user directories to cloud storage in ~30 seconds, replacing manual folder-by-folder transfers.
- Support 500+ county users through Active Directory account/permission management, BitLocker recovery, and workstation imaging and deployment.

Projects

Fantasy Football Decision-Support Platform

August 2026 – Present

Python, Streamlit, Polars, LightGBM

github.com/Jqkeyyy/fantasyfootball

- Built a Sleeper/nflverse decision platform using 740K+ historical records (2015–2025), with API ingestion and Polars/Parquet caching for projections, draft, start/sit, waiver, and trade analysis.
- Developed leakage-safe LightGBM/scikit-learn pipelines with ~50 features and five-season walk-forward validation; improved availability Brier score from 0.220 to 0.148 and cut DST projection error 9–10%.
- Implemented up to 20K Monte Carlo matchup simulations, 3K season paths, and PuLP/CBC lineup optimization; backed by 1,265 pytest tests across 85 modules with strict mypy/Ruff checks.

Skills

Languages: Python, Java, TypeScript, JavaScript, SQL, R, PowerShell, HTML/CSS

Frameworks & ML: React, React Native, Node.js, Streamlit, Polars, pandas, NumPy, scikit-learn, LightGBM, PyTorch, TensorFlow, Tailwind CSS

Data & Tools: PostgreSQL, Supabase, Firebase, Parquet, REST APIs, Git/GitHub, Docker, Jupyter, pytest, mypy, Ruff, n8n, Twilio, Vapi
